

Task 5: Write a Java Program to Find the Kth Smallest Element in an Array of Integers

PROGRAM:

```
import java.util.Arrays;
import java.util.Scanner;

public class Task5 {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        System.out.print("Enter array size: ");
        int n = sc.nextInt();

        int[] arr = new int[n];

        System.out.println("Enter array elements:");
        for (int i = 0; i < n; i++) {
            arr[i] = sc.nextInt();
        }

        System.out.print("Enter K: ");
        int k = sc.nextInt();

        Arrays.sort(arr);
```

```
        if (k >= 1 && k <= n) {  
            System.out.println("Kth Smallest Element = " + arr[k - 1]);  
        } else {  
            System.out.println("Invalid K");  
        }  
    }  
}
```

OUTPUT:

```
C:\Users\vin24\OneDrive\Desktop\java programs>java Task5  
Enter array size: 5  
Enter array elements:  
1 2 3 4 5  
Enter K: 2  
Kth Smallest Element = 2
```

```
C:\Users\vin24\OneDrive\Desktop\java programs>java Task5  
Enter array size: 5  
Enter array elements:  
1 2 3 4 5  
Enter K: 6  
Invalid K
```
